Updated date: Mar 25, 2021

 An abbreviated version of this protocol was published in eLIFE in Nov 2020

Belief updating in bipolar disorder predicts time of recurrence

DOI: 10.7554/eLife.58891

Detailed protocol

Thanks Emma,

I'm not sure I understand your question regarding model 1.

It's a multiple linear regression with the dependent variable (i.e. time in euthymia) log transformed to account for skewness. The predictors are listed in the model formula.

Hope this helps.

Thanks for your interest.

Best, Paolo
